Eduroam password change

Changing password on OSX Yosemite

Before you begin

The following instruction is supported by the TU Delft and has been tested to be working. However, we offer this manual to you as an extra service. In case you have a configuration or version of **OSX Yosemite** other than the one described here and you have problems **changing your eduroam password**, neither ICT nor a Servicepoint will be able to help you to **solve your problem**.

Prerequisites

In order to **change your password**, make sure that **your password is valid**.

Change password on Eduroam

Step 1. Fill in your new password with the correct **<NETID>@tudelft.nl**

The screenshot shows a macOS system dialog box titled "Enter a name and password for network 'eduroam'". It features a Wi-Fi icon on the left. Below the title, there are two text input fields: "Account Name:" and "Password:". The "Password:" field is highlighted with a red border. At the bottom left, there is a checked checkbox labeled "Remember this information". At the bottom right, there are two buttons: "Cancel" and "OK".
