Exchange password renewal

Before you begin

The following instructions are supported by the TU Delft and have been tested to be working. However, we offer this manual to you as an extra service. In case you have a configuration or version of **OSX Yosemite** other than the one described here and you have problems **changing your mail exchange password**, neither ICT nor a Servicepoint will be able to help you to **solve your problem**.

Prerequisites

In order to **change your password**, make sure that **your password is valid**.

Renew password on Exchange

Step 1. You will see this window if you changed your password. Click on **Yes** to proceed changing your password.

Step 2. Fill in your new **Password** with the correct **NETID**. Remember to check the **Remember Password** checkbox.
