

# Procedure TiSD:

for graduation-labs in Master 3 and 4 of the master Architecture Urbanism and Building Sciences

The graduation project has to be focused at Sustainable Development, which means the main design/research question is aimed at elaborating sustainable development to a next (higher) level.

For the student who wants to get the annotation – in agreement with the studio – a TiSD tutor is added to his tutor team. Sometimes (preferably) it is possible to replace the first or second mentor by a TiSD mentor. In both cases the student has to take the initiative. Students should always contact the studio coordinator in advance to ask specifically about graduating with a TiSD appendix and ask for their TiSD approved tutor.

TiSD tutors are appointed by the TiSD referents, a list of tutors is available by the TiSD referents (for referents see [www.tudelft.nl/tido](http://www.tudelft.nl/tido)).

Students will discuss “sustainability” from the start of their graduation project (MSc3) until the graduation with the TiSD-tutor.

Once the student meets all the TiSD requirements according to the TiSD tutor a major sustainable contribution to the final project at the P4, students are required to hand in a form specifying all of the requisites to obtain their TiDO/TiSD appendix. In the period between P4 and the P5, the completed TiSD form has to be checked and approved with one of the [TiSD referents](#).

Subsequently the signed form has to be submitted to the board of examiners of the relevant faculty together with the graduation request forms.
