Help with choosing courses:

A course code at the TU consists of two or three letters at the front of the code and 4 numbers at the end. The letters at the front of the code tells you to which master programme the course belongs and which faculty is responsible for the course. Courses taught at the faculty of Civil Engineering and Geosciences have the following letters in their course codes: CIE (Civil Engineering), AES (Applied Earth Sciences), TIL (Transport, Infrastructure and Logistics) and CME (Construction Management Engineering).

When you look at the programme of our master programmes you will find that there are courses listed there that have a different letter combination in front of them.

These courses are part of the programme but they are offered by a different faculty. If the course is part of the programme then you are allowed to choose the course. However, do please note that there could be exceptions to this rule. Some courses that are mentioned in our master programmes may not be accessible for exchange students for different reasons. We will always inform exchange students if they cannot choose the selected course or if we have to ask permission before an exchange student can follow the course.

At least 70% of the chosen courses have to be taught at the Faculty of Civil Engineering and Geosciences. For the other 30% students are free which courses they want to follow. We recommend students to choose courses from either the Faculty Technology, Policy and Management (TPM), the Faculty of Aerospace Engineering (AE) or the Faculty of Mechanical, Maritime and Materials Engineering (3ME). These faculties have the least restrictions when it comes to students choosing their courses. Students are allowed to choose courses from the other faculties as well, but often special permission has to be obtained before students are allowed to take the courses. The only faculty where students are not allowed to follow courses is the Faculty of Architecture.
