Where humans and machines intersect, Biomechanical Design provides solutions that allow the biological and mechanical systems to function effectively together.

Designing systems where humans and machines meet
One facet of Biomechanical Design is to investigate human movement, human perception, and human control characteristics. Another facet is to design user friendly, intuitive technologies based on an understanding of human characteristics. The knowledge of human behaviour acquired can be used to diagnose diseases, or serve as input for the development of systems that interact with or mimic biological systems. In contrast to the more clinically oriented MSc Programme in Biomedical Engineering, Biomechanical Design focuses on the engineering challenges of developing bio inspired robots, fine mechanical systems, and haptic interfaces.

Specialisations
• BioRobotics (BR)
Until recently, robots only played a significant role in the manufacturing industry. Nowadays robots begin to perform a wide variety of tasks in society. The requirements for these service robots are vastly different from those for manufacturing robots. Instead of speed, accuracy, and power, service robots require safety, adaptability, and gentleness. This is the field of biorobotics. The word 'bio' has two meanings. First, biology is the environment for the robots. They have to cope with humans and nature. Second, biology serves as a source of inspiration, as the human body excels when it comes to adaptability and gentleness. This specialisation focuses on the analysis and development of robots that physically interact with humans. Topics include humanoid robots, robot vision, and robot touch. You will learn how to design, simulate, and control robots, how to model the human body and brain as a control system, and how to create mechanisms that interact successfully with humans. The knowledge obtained during this study is highly regarded within the traditional mechanical engineering industries; our alumni find jobs in all major industrial sectors.
BioInspired Technology (BITE)

Probably the greatest diversity of mechanical designs is found in nature. For each challenge posed by the often hostile environment, a wealth of solutions to cope with the threats has evolved. Inspiration from nature drives the search for innovative solutions in such fields as medicine, rehabilitation, Microsystems, and mechatronics. In the BioInspired Technology specialisation, an extensive excursion into biology provides the inspiration to search for innovative solutions to what are often uncommon challenges. You will gain the skills required to develop innovative fine-mechanical systems that are inspired by mechanical approaches in biology. You will learn, for example, how to use springs and elastic materials to make lightweight and inherently safe, elegant constructions, inspired by muscular skeleton systems. You will gain knowledge about innovative design approaches in nature and skills to translate the biological working principles into technological solutions. You will also be trained to develop mechanical systems that naturally complement the behaviour of biological systems, in particular humans, so that the mechanisms are easy to use by a human controller.

Haptic Interfaces (HI)

Traditionally, most human-machine interfacing has focused on providing visual and auditory information, neglecting an important communication channel: haptics. Haptic sensation incorporates the sense of touch and proprioception, which allows quick and intuitive physical interaction with our environment. In the last decade, the use of haptics has seen a great surge of interest in a number of fields such as in: (a) restoring physical interaction (e.g., in teleoperation systems for interaction with remote environments as encountered in space and deep sea applications); (b) simulating physical interaction (e.g., for medical and automotive simulators); and (c) enhancing physical interaction (e.g., providing additional guidance for rehabilitation or driver support systems). This specialisation focuses on developing human-centered haptic interfaces in all of the above fields. Such human-centered design requires a good understanding of the mechatronics of haptic interfaces as well as of human control strategies, perception, and motion control. You will focus on the development of haptic devices (hardware and controller software), on the design requirements of devices for specific tasks, and on studies into the way humans interact with such devices.

1 EC = 28 hrs study, according to the European Credit Transfer System (ECTS), total amount of credits MSc programme = 120 EC

For more information on all courses please visit: [www.studyguide.tudelft.nl](http://www.studyguide.tudelft.nl)
First year (60 EC)

Obligatory courses (29 EC)
- Control Systems
- Design
- Physics and Measurement
- Multibody Dynamics B
- The Human Controller
- Nonlinear Mechanics
- Advanced Heat Transfer
- Man-Machine Systems
- Experimental Design, Statistics and the Human

Specialisation Obligatory (15-18 EC)
- BioRobotics (BR)
- BioInspired Technology (BITE)
- Haptic Interfaces (HI)
- Human and Robot Locomotion
- Knowledge Based Control Systems
- Modern Robotics
- Bio Inspired Design
- Neuromechanics & Motor Control

Elective Courses (16 EC or more)

Second year (60 EC)

First Semester
- Internship Research Projects (15 C)
- Literature survey (10 EC)
- Graduation Project (35 EC)

Second Semester
- Control Systems Lab
- Precision Mechanism Design
- Systems Identification and Parameter Estimation
- Compliant Mechanisms
- Physiology and Engineering
- Applied Experimental Methods: Human Factors
Admission requirements and application procedure

Dutch BSc degree
In most cases, if you hold a BSc degree and the Master’s programme is closely related to your Bachelor’s programme, you will be admitted directly into the programme. However, if the Master’s programme does not follow directly from your undergraduate programme, you will be required to take additional courses in what is called a bridging programme. This may be a standard programme, or it may be tailored to your specific situation.

To see which Master’s programmes are open to you on completion of your Bachelor’s degree Dutch university, go to www.doorstroommatrix.nl.

Application goes through Studielink: tudelft.studielink.nl

Dutch HBO degree
An HBO Bachelor’s degree does not qualify you for direct admission to a TU Delft Master’s degree programme. To start a Master’s degree programme, you will first need to complete a supplementary programme in order to bring your knowledge to the required level. You can do this during your HBO programme by completing a bridging or by means of a bridging programme after securing your HBO diploma.

Entrance requirements for mathematics and English (some exceptions) apply for both the bridging minor and the bridging programme. See www.hbodoorstroom.tudelft.nl for detailed information.

Application goes through Studielink: tudelft.studielink.nl

International applicants
To be considered for admission to a MSc Programme you’ll need to meet TU Delft’s general admission requirements.

1. A BSc degree (or a proof that you have nearly completed a BSc programme) in a field closely related to the MSc programme.
2. A BSc Cumulative Grade Point Average (CGPA) of at least 75% of the scale maximum.
3. Proof of English language proficiency:
   • TOEFL (Test of English as a Foreign Language) with a minimum score of 21 for each section and an overall band score of at least 90 (internet-based test). Please note that we only accept the TOEFL internet-based test.
   • or IELTS (academic version) with a minimum score 6.0 for each section and an overall Band score of at least 6.5.
   • or proof that you have passed the University of Cambridge ‘Certificate in Advanced English’ with a minimum grade A or the University of Cambridge ‘Certificate of Proficiency in English’.

For international students, the application period starts in October and closes on 1 April. To start an MSc application, fill in the online application and pay the refundable application fee of €100. Then send hard copies of the application documents to TU Delft’s International Office. Please note that you should apply early when you want to be considered for a scholarship as well!

For more information about the application procedure and studying at TU Delft in general, go to: www.admissions.tudelft.nl.
