The MSc Architecture, Urbanism and Building Sciences programme at TU Delft’s Faculty of Architecture and the Built Environment is underpinned by the renowned Dutch experience in architecture, spatial planning and the built environment professions. The teaching approach borrows from the Dutch tradition of working in a multi-disciplinary way with students collaborating in groups to create integrated solutions for the built environment. Our aim is to enable students to build the practical skills needed to make an effective contribution to practice, whilst also laying the foundations of understanding principles that will guide long-term career development.

Programme
This programme sets itself apart from other architecture programmes in the diversity of directions available. Blending knowledge and skills from design practice, from the physical and social sciences, technology and engineering, this programme explores innovative ways to create more sustainable development. Students can choose between five tracks: Architecture, Urbanism, Management in the Built Environment, Building Technology or Landscape Architecture.

The faculty is keen to receive applications from ambitious and talented students in the Netherlands and other countries. International and home students benefit from the reputation of the faculty, which attracts students from all over the world, creating a truly cosmopolitan ambience. Teaching draws on a very wide variety of examples of the built environment from the Netherlands and many other countries, encouraging students to actively share knowledge and experience. Students are able to develop an independent and academic attitude and are giv-
en the opportunity to design their own projects in the specialty of their choice, supported by an excellent infrastructure of model-making facilities, studio spaces and frequent excursions, workshops and seminars.

Specialisations

Architecture
The Architecture track draws on the rich architectural culture of the Netherlands. Students learn how to develop innovative building projects that use design as a means to deal with the technical, social and spatial challenges encountered in the built environment.

Specialisations:
• Architectural Engineering
• Architecture and Dwelling
• Architectural Design Crossovers
• Architecture and Public Building
• Borders & Territories
• Complex Projects
• Explore Lab
• Form studies
• Heritage and Architecture
• Interiors Buildings Cities
• Methods and Analysis
• The Why Factory
• Urban Architecture

Urbanism
The Urbanism track draws on the Dutch tradition of combining urban design, landscape architecture and spatial planning. Students learn to integrate social, cultural, economic and political perspectives with the natural and man-made conditions of the site in order to shape and plan for more sustainable development.

Themes:
• Urban Fabric
• Transitional Territories - Water, Land and Infrastructure
• Urban Metabolism
• Regional governance
• International planning and developing regions
• Metropolitan spatial structures
• History and heritage vector
• Complex Cities

Building Technology
The Building Technology track encompasses a broad spectrum of engineering and architectural design skills that lead to one of the dominant professions of the future: the sustainable designer. Through focusing on structural, façade, product, climate and computational design, students learn how to innovate and contribute to smart buildings/environments that are sustainable, comfortable and environmentally intelligent.

Themes:
• Structural Design
• Climate Design
• Façade & Product Design
• Design Informatics

Landscape Architecture
The Landscape Architecture track deals with design through all scales as an architectonic composition of natural and artificial materials. Students learn to see landscape as a contextual underlay for understanding, ordering and acting in spatial transformations. We emphasise the historical continuity of landscape as a process of time and flows.

Themes:
• Architecture and Landscape
• Dutch Landscape
• Urban Landscape
• Flowscapes

Career prospects
Graduates from this programme have an integrated, design-led approach to tackling complex issues of the contemporary built environment allowing them to take up a diversity of career prospects in architecture and related fields. Given the university’s connection to important industry figures, graduates have good access to job opportunities in the Netherlands and abroad.
