Evaluation criteria for Building Technology

Portfolio and Letter of Motivation give the following profile of the applicant:

• Applicant shows appropriate knowledge of applied building technology.
• Applicant shows capability of thinking and designing in integrated systems and understand technical complex relations. The role of different disciplines such as architectural design, structural design, façade design, and climate design and computational design should be understood.
• Applicant shows knowledge and experience in building design and particular architectural design.
• Applicant has good quality communication skills in writing, graphics and/or other media.
• Applicant has the ability to independently formulate design goals, resulting from research or functional analysis, to create options or to explain the reasoning behind final decisions.

All criteria must be met. Failing on one of them can lead to a rejection.
