Platform for Affordable Dwelling

PAD

Platform for Affordable Dwelling

The Platform for Affordable Dwelling (PAD) is a digital platform dedicated to share knowledge worldwide among students, scholars, architects and planners.

Its purpose is to connect the work of students at Delft University of Technology with the work of students and researchers across the world. Goal is to create tools, methods and strategies for affordable housing design.

With PAD we want to extend the scope of education on affordable housing by taking advantage of the capacities of the internet and

digital media. PAD allows students worldwide to connect and exchange their ideas, designs and opinions on the urgent question how to create liveable and accessible housing in the rapidly urbanizing world.

Being part of the Global Housing Study Centre of the faculty of Architecture and the Built Environment, PAD has access to a treasure of expertise which can provide valuable information.

PAD will be one of the key education projects of the Delft Global Initiative.
