

Aircraft Manufacturing Laboratory

We are a team of Master's students from the Faculty of Aerospace Engineering at TU Delft. Cooperating with different disciplines within the faculty, we are assembling an aircraft kit. We do this in the framework of a Master course. The course was set up as part of the Educational Fellowship of Joris Melkert. The course gives us 6 EC and takes 20 weeks. Every 20 weeks a new team of students will take over and also get the chance to participate in this very unique experience.

Our workshop is located in the Aircraft hall within the faculty, where a dedicated space has been created for us. The aircraft itself is a Van's RV-12, an all-metal two-seater aircraft.

In a couple of years from now, the aircraft will be certified and ready to fly!

If you want to learn more about the project, look at the website:
