

# Engineering Students and the Skills of Learning about Future Trends of Technology

## Project

This project investigates the approaches high-tech companies in different engineering domains take in training their engineers to:

- Spot trends in engineering and technology
- Set goals
- Determine priorities
- Identify potential risk and opportunities

In line with organisation objectives.

## Objective & Approach

This project intends to underpin a concrete base for educating engineering MSc students, about the innovation approach of their relevant industries in practice, considering the future trends of their technological activities.

The research also attempts to yield insights as to different types and stages of innovation, as well as various styles of analysing the related risks and making decisions about conducting innovation-oriented procedures within companies.
